Wispr Flow Shortlisting Task

⚠️ *IMPORTANT: READ BEFORE STARTING*

*Your Wispr Flow account **MUST be created using our referral link:***

https://ref.wisprflow.ai/hhg

*If you do not create your Wispr Flow account through this link, **your submission will NOT be counted.** This is mandatory for participation in the task.*

What to build

Build anything you want using Wispr Flow, but you must build it entirely using your voice.

The project can be **anything**: a web app, tool, game, utility, automation, experiment, or any other technical project. It can be simple or complex. There are no restrictions on what you build, as long as Wispr Flow is used to build it.

The main objective is to demonstrate how effectively you can use **voice-driven development** to turn an idea into a working project.

Technical requirements

1. ***Wispr Flow required** You must use Wispr Flow to build the project. The project should be created using your voice rather than manually writing the code yourself.*
2. ***Wispr Flow referral link required** Your Wispr Flow account must be created using the referral link provided above. Accounts created through any other link will not be counted for this task.*
3. ***Build anything** There are no restrictions on the type, complexity, or purpose of the project. You are free to choose your own idea and implementation.*
4. ***Voice-driven development** Your video submission must clearly demonstrate you using Wispr Flow and your voice to build the project. The recording should show the actual development process, not just the final result.*
5. ***Working project** The project should be functional enough to demonstrate what you built. It does not need to be production-ready.*
6. ***No specific tech stack** You may use any programming language, framework, library, or technology required for your project, as long as the project is built using Wispr Flow.*

Submission requirements

- *Project Github repo link*
- *A demo video showing you using Wispr Flow to build the project*
- *Submission form link: https://forms.gle/Lv9wF8gYVHdEqfJW8*

No resubmissions will be allowed, submit only when your build is final.

Timeline

- **Task launch:** September 29, 2026
- **Deadline:** October 10, 2026, 11:59 PM
